

OXYGEN FORENSIC® VIEWER

Share extracted data with authorized personnel

What is Oxygen Forensic Viewer?

Oxygen Forensic® Viewer is an application developed to share extracted device data with colleagues, remote departments and other authorized personnel who have no live device at hand. The Viewer can be also used by non-technical specialists who are not skilled in device connection and do not perform live data acquisition but need to view and analyze device data.

Oxygen Forensic® Viewer uploads .ofbx backups made in Oxygen Forensic® Detective and shows all the evidence set that was available to the forensic expert who performed live device data acquisition.

Licensing and system requirements

A free copy of Oxygen Forensic® Viewer can be downloaded from the customer area by all registered users of Oxygen Forensic® Detective.

Oxygen Forensic® Viewer is distributed in a portable version that requires no installation or activation. It is compatible with all the latest Windows OS versions.

Key features

- Displays complete device evidence: contacts, messages, calls, calendars, notes, tasks, whole file system, Wi-Fi connections history, apps, passwords, etc
- Thoroughly parses apps data: account information, passwords, contacts, calls, chats, geo data, cached files and logs.
- Helps to uncover deleted records and files: contacts, calls, messages, pictures, videos, databases, apps artifacts and more.
- Provides rich data sorting and filtering capabilities in every section.
- Allows to bookmark important entries and view them later in Key Evidence section.
- Offers data export to all popular files formats: PDF, RTF, XML, etc.
- Has an easy-to-use interface to which users got accustomed utilizing other Oxygen Forensic® products.
